

Recommendation

I hereby confirm that Daniel Octavius H. Palmquist has attended KOBAJ.com's internship program as part of his computer science studies at Zealand in the period 11. January 2021 to 19. March 2021.

Daniel has function as a DevOps Engineer in kobaj.com where he was part of the operations and the development projects in kobaj. Daniel was given several assignments which involved programming languages, frameworks and technologies which he was unfamiliar with. This was not an obstacle and Daniel quickly mastered both Docker, Django and the Google Cloud App Engine.

Using environments variables Daniel was able to semi-automate our deployment process for specific environments.

Daniel has an interest in cyber security and was given a special assignment, where he on the basis of an external vulnerability analysis closed several known security holes on our web servers and online services. Daniel also ensured web interfaces with user authentication using Keycloak (Identity and Access management).

Daniel was part of the development of an internal administrative web-interface where the day-to-day tasks of kobaj.com was formalized, improved and in some cases digitized.

Daniel never hesitated to take on a challenging task and during his internship excelled in many areas of software development, cyber security and operations.

Andreas Borchsenius

CTO, KOBAJ.com
